Abstract

The new EU-Accounting Directive of 26 June 2013 (DIRECTIVE 2013/34/EU) has the intention to harmonize the accounting and financial reporting of enterprises in the European Union. “Think small first” is the central principle in the new EU-Accounting Directive and the new regulations have to be adopted in the laws of European member states by 20 July 2015. The International Financial Reporting Standard for Small and Medium-sized Entities (IFRS for SMEs) was published in 2009 by the International Accounting Standards Board (IASB). The IASB intended to create simplified international financial reporting standards for the special needs of smaller and medium-sized enterprise. The IASB completed in May 2015 a comprehensive review of the IFRS for SMEs and made amendments to the Standard. The revised version of the IFRS for SMEs will be issued in the last quarter of 2015.

The aim of the paper is to analyze the compatibility of the IFRS for SMEs and the new EU-Accounting Directive and the problems in connection with the harmonization of the European accounting legislation especially in Germany. Based on the results of the research most of the former incompatibilities could be removed, but the remaining complexity of the IFRS for SMEs and the lack of an option for the member states to adopt the IFRS for SMEs as an accounting and reporting standard besides or instead their local accounting principles will prevent the wide use of the IFRS for SMEs in Germany and in other member states of the European Union.

Keywords: EU-Accounting Directive, financial statements, IFRS for SMEs
In June 2013 the IASB issued a Guide for Micro-sized Entities Applying the IFRS for SMEs (2009) according to IFRS Foundation (2014) fact sheet to help micro entities the use of the IFRS for SMEs. Since the IFRS for SMEs has been published in 2009 the Standard has been permitted or required by worldwide 63 jurisdictions according to the fact sheet by the IFRS Foundation (2014) last updated in August 2014. The empirical study by Kajüter, Saucke, Hebestreit and Schellhorn (2015) showed that the standard is relatively prevalent in Middle and South America as well as in Africa. Whereas several Asian countries intend to permit the use of the IFRS for SMEs by local firms in the nearer future, none of the jurisdictions of the European Union has adopted the IFRS for SMEs state Kajüter, Saucke, Hebestreit and Schellhorn (2015), even though the use of a similar reporting framework would be a positive step towards consistent and comparable financial statements for small and medium sized enterprises in Europe according to Bohušová (2010).

After practical experience with the Standard of about two years the IASB has undertaken an initial comprehensive review starting in June 2012 with a request for information seeking public views on whether there is a need to make any amendments to the IFRS for SMEs according to the IFRS Foundation (2014) fact sheet. The comment deadline was November 2012. The 89 participants of the request for information were government and accounting bodies, standard setters, audit firms and consultants. The author of this paper has also posted his recommendations of amendments to the IASB. In October 2013 the IFRS Foundation (2013) published the Exposure Draft of amendments to the IFRS for SMEs. The IFRS Foundation (2013) Exposure draft contains a variety of mostly minor proposals for SMEs. The IFRS Foundation (2013) Exposure Draft of amendments to the IFRS for SMEs according to the IFRS Foundation (2014) was published in October 2013. The IASB has deliberated the changes to the Exposure Draft by the end of 2014 and aims to publish the revised IFRS for SMEs in 2015. The effective date of the amendments should be 1 January 2017, earlier adoption permitted.

The new EU-Accounting directive (2013) provides the legal framework for single company and company accounts for undertakings based in the European Union according to the Federation of European Accountants (FEE, 2014). The new EU-Accounting Directive (2013) replaces the 4th Directive for single company accounts and the 7th Directive for consolidated accounts. The amendments of the new EU-Accounting Directive (2013) have to be transposed into national law by the EU Member States latest by 20 July 2015. According to Lanfermann (2013) many of the amendments proposed by the European Commission to reduce the options for the Member States in order to improve the comparability of the financial statements with the EU could not pass the European Parliament and Council. Lanfermann (2013) and Kreipl (2013) point out that the “Materiality”- and “Substance over form”-approaches have to be anchored in the legislations of the Member States. FEE (2014) introduces another approach: “the bottom-up”- approach meaning that the new EU-Accounting Directive starts with the requirements of small entities, following with the additional requirements for medium and larger undertakings. The thresholds whether an undertaking will be classified as small, medium or large have been adjusted by the new EU-Accounting Directive (2013) see Tab. I.

According to the new Accounting Directive (2013) the Member States can exempt smaller and medium-sized undertakings from the preparation of consolidated financial statements. According to

Müller (2013) the German legislation will choose the options to exempt smaller and medium-sized undertakings from the preparation of consolidated financial statements and will define following threshold in the German Commercial Code (HGB) see Tab. II.

The increase of the thresholds, partially more than 20%, determines that the European Parliament and the Council intended first to deregulate the requirements of small and medium-sized undertakings.

### MATERIALS AND METHODS

The paper is concerned with the compatibility of the IFRS for SMEs and the new EU-Accounting Directive (2013). The starting point of exploring the outlined problem is the analysis of the current and future framework for the accounting and reporting of smaller and medium sized enterprises in the European Union. The IFRS for SMEs was published in 2009 by the International Accounting Standards Board (IASB) to provide a self-contained accounting and reporting standard for smaller and medium sized enterprises in addition to the full IFRS and local Generally Accepted Accounting Principles (GAAP). After the completion of a comprehensive review of the IFRS for SMEs in May 2015 the IASB intends to issue a revised version of the IFRS for SMEs in the last quarter of 2015. Whereas the full IFRS have to be applied by listed companies in the European Union for the preparation of consolidated financial statements the IFRS for SMEs can only be applied voluntarily by not-listed companies in the European Union since the European member states have not yet permitted the use of the IFRS for SMEs besides or instead their local GAAPs so far.

To determine the compatibility of the IFRS for SMEs and the requirements of the new EU-Accounting Directive (2013) for the accounting and the presentation of financial statements of SMEs in Germany methods of description and analyses are used. The description of the relevant key issues of the IFRS for SMEs (2009) and the new EU-Accounting Directive (2013) supports to classify and structure the aspects to be analyzed. Starting point of the analyses of the compatibility of the IFRS for SMEs (2009) and the new EU-Accounting Directive (2013) were results from former third party studies. With respect to the analyses of the compatibility of the IFRS for SMEs (2009) with the 4th and the 7th EU Accounting directives the most relevant third party study was carried out by the European Financial Reporting Advisory Group (EFRAG) in 2009 and 2010. The own analysis used the results of EFRAG (2010) and examined whether there are still incompatibilities between the new EU-Accounting Directive (2013) and the IFRS for SMEs (2009) and its possible amendments due to the Exposure Draft to the proposed amendments to the IFRS for SMEs (2013).

In order to determine whether the IFRS for SMEs could play a more important role in the accounting of undertakings in Germany and in the European Union methods of analyses and deduction are used. The method of synthesis is used for the formulation of proposals and conclusions, especially to propose to what extent the German legislation has to be amended to be in line with the requirements of the new EU-Accounting Directive (2013).

### RESULTS

The results of this analysis are presented in tables, in which the accounting requirements were analyzed with regard to its compatibility (shown as “compatible”), incompatibility (“incompatible”) to the IFRS for SMEs and the new EU-Accounting Directive (2013) and respectively the German Commercial Code (HGB). If the result of the analysis is marked as “depending” the field is either not assessed or an amendment in the IFRS for SMEs or in the German legislation has to be done to achieve compatibility.

#### Useful Lives of Goodwill and Other Intangibles

The determination of the useful lives of goodwill and other intangibles will be amended according to the Exposure draft of the proposed amendments to
the IFRS for SMEs (2013) and according to the new EU-Accounting Directive (2013).

Depending on the entity not to choose an amortization period shorter than 5 years while preparing financial statements according to IFRS for SMEs the incompatibility will no longer exist. The new requirements of the amortization period of the goodwill and other intangible assets due to the new EU-Accounting Directive (2013) have to be transposed in the German legislation.

### Revaluation Model for Property, Plant and Equipment

The necessity of the permission of the revaluation model in the IFRS for SMEs was intensively discussed during the Comprehensive Review by the IFRS Foundation (2013). In order to keep the accounting for SMEs less complex the IASB (2013) decided not to reconsider the permission of the revaluation model for property, plant and equipment. According to the new EU-Accounting Directive (2013) Member States of the European Union can permit or require the revaluation model for certain assets or undertakings. Depending on the decision of the Member States to permit or require the revaluation model for assets others than financial instruments incompatibility between the IFRS for SMEs and European legislation could arise. The amendment of the legislation in Germany is not mandatory, since the current treatment is in line with the new EU-Accounting Directive (2013).

### Deferred Tax

The framework of the deferred tax in the IFRS for SMEs was based on the IASB's Exposure Draft ‘Income tax’ which was never finalized. The IASB (2013) decided to amend the IFRS for SMEs editorially to align them with IAS 12 (Income taxes).

Basically the IFRS for SMEs and the EU Accounting directive follow the same approach in the recognition of deferred tax liabilities and tax

assets. Amendments will be made in the IFRS for SMEs and the German Commercial Code (HGB) to align with IAS 12 or respectively with the new EU-Accounting Directive (2013).

**Unpaid Subscribed Share Capital**

An incompatibility exists in the treatment of unpaid subscribed share capital. The IFRS Foundation has not removed this incompatibility in the Exposure Draft (2013) and therefore likely no amendment will be made in the IFRS for SMEs to delete the incompatibility. The German legislation had already transposed the new requirement by the new EU-Accounting Directive (2013) in the German Commercial Code (HGB).

**Revenue or Net Turnover**

The new EU-Accounting Directive (2013) redefines the net turnover in the profit and loss statement. The distinction of income between “typical” and “not typical” has been removed. The former incompatibility between the IFRS for SMEs and the former Accounting directives has been reversed, since the new EU-Accounting Directive (2013) reversed the distinction of income and expenses between “typical” and “not typical” business activities. The German legislation has to transpose the new requirement due to the new EU-Accounting Directive (2013) in to the German Commercial Code (HGB).

**Extraordinary Items**

According the IFRS for SMEs (2009) an entity shall not present or describe any items of income and expense as "extraordinary items" in the statement of (comprehensive) income and was therefore incompatible with the 4th Council Directive which required certain items of income and expenses as extraordinary items.

The former incompatibility between the IFRS for SMEs and the former Accounting directives has been reversed. The German legislation has to transpose the new requirement due to the new EU-Accounting Directive (2013) in to the German Commercial Code (HGB).

**Composition of the Financial Statements**

Whereas according the IFRS for SMEs (2009) an entity shall present a complete set of financial statements including notes, a cash flow statement and a statement of changes in equity the presentation of a balance sheet, profit and loss account and selected notes to the financial statements is generally sufficient according to the new EU-Accounting Directive (2013). Micro-undertakings may prepare only an abridged balance sheet and an abridged profit and loss account without notes depending on the legislation of the Member State. Besides the preparation of financial statements medium-sized and larger undertakings have to prepare management reports.

<td>Depending</td>
</tr>
</tbody>
</table>

Source: work of author on the basis of the IFRS for SMES (2013) and the new EU-Accounting Directive (2013)
The incompatibility in the composition of the financial statements can be removed by the Member states since they have the option to require from medium-sized and larger undertakings the preparation of a cash flow statement and a statement of changes in equity besides the balance sheet, profit and loss account and the notes. The requirements of the new EU-Accounting Directive (2013) for consolidated financial statements remain basically unchanged to the 7th Directive. Therefore consolidated financial statements still consist of a (group) balance sheet, profit and loss account, notes, a cash flow statement and a statement of changes in equity. Additionally, a management report has to be provided for the group. Small groups must be, medium-sized groups can be exempted from the preparation of consolidated financial statements according to the new EU-Accounting Directive (2013).

### DISCUSSION AND CONCLUSION

The new EU-Accounting Directive (2013) was part of European Union program to stimulate the business of small and medium-sized undertakings by deregulating accounting requirements. The use of the IFRS for SMEs is not prohibited by the new EU-Accounting Directive (2013), but it is not intended by the European Parliament and the European Council to adopt the IFRS for SMEs via endorsement. According to FEE (2014) the endorsement of the IFRS for SMEs has been rejected because the IFRS for SMEs would not serve the simplification and the administrative burden for smaller and medium-sized undertakings. As a consequence, Member States of the European Union can transpose the IFRS for SMEs in their legislation, but obviously only if the IFRS for SMEs is in line with requirements of the new EU-Accounting Directive (2013). The analysis of the compatibility of the IFRS for SMEs and the new EU-Accounting Directive (2013) determined that most of the former incompatibilities between the IFRS for SMEs (2009) and the 4th and the 7th Directive could be removed by the proposed amendments by the Exposure Draft of the IFRS Foundation (2013). The analysis showed that the only real incompatibility between the Exposure Draft of the IFRS for SMEs (2013) and the new EU-Accounting Directive (2013) is the treatment of the unpaid subscribed capital, obviously not an important or frequent accounting issue for small and medium-sized undertakings. Other discovered incompatibilities could be reversed by the Member States of the European Union, if the respective accounting options provided by the IFRS for SMEs or the new EU-Accounting Directive (2013) are used correspondingly. Even with the proposed amendments of the Exposure Draft (2013) the major obstacle for the use of the IFRS for SMEs in Europe is the remaining complexity compared to the requirements of the new EU-Accounting Directive (2013). Especially for micro- and small undertakings the accounting and presentation of financial statements according to the Accounting Directive is much more simple compared to IFRS for SMEs. Furthermore, financial statements according to the German Commercial Code (HGB) are still the basis for taxation and dividend distribution. Consequently, the use of the IFRS for SMEs in Germany is currently no subject-matter. The increasing worldwide relevance of the IFRS for SMEs will likely bring the adoption of the IFRS for SMEs on the agenda of European Parliament and Council. According to the authors view the European Union should carefully watch the implementation of the amendments of the Exposure draft (2013) in the IFRS for SMEs and should allow small and medium-sized entities the use of the revised IFRS for SMEs in Europe.
